

Citizen Electronics Co., Ltd (Japan) producing LEDs since 1983., is one of the first post

Citizen Electronics Co. Ltd Japan producing LEDs since 1983. is one of the first suppliers in this market and a pioneer in Chip On Board technology for General lighting. Developed high power LEDs which combine high luminous flux and high efficiency in accordance with the highest international standards of the led industry. The unique production technology of many patents professional team and continuous work on improvement of our products allows us to be industry leaders and set the trends of development. Company city-EI is a distributor of the product line Citiled Citizen Electronics Co. Ltd in Russia, Belarus and Kazakhstan. Led lighting is the focus as the lighting of the future generation it is replacing the incandescent lamps and fluorescent lamps. Low power consumption-long life good color rendering, and environmental friendliness are the main advantages of LEDs. Currently LEDs are the most modern product on the lighting market. The advantages of these products is that they optimize the lighting process with high positions of energonositeli in comparison with other lighting technologies. The problem of increase of energy consumption in Russia raised the question of lighting products established on the principle of energy-saving technologies. The use of led lighting in different sectors of the economy helps in a single investment to save on future operating
