

High-quality led lighting

Request a call Led lighting is a new line of modern lighting technology the light sources are LEDs. Led lamps have many advantages in contrast to incandescent and fluorescent. Led technology thanks to all these advantages are applied by our company in manufacturing office industrial shopping street, housing led lamps. They emit a steady light not irritating to the eye. Devices well protected against various negative factors whether sudden changes in temperature, frost humidity of atmospheric precipitation is a mechanical effect. LED lights replaced mercury vapor and fluorescent lamps. They are used everywhere. A distinctive feature of this equipment is low power consumption without sacrificing performance. Such as led light bulb with a power of 25-35 W corresponds to the tungsten analogue with a range of 100-150 watts. At the same luminous flux can reach 3200 Lum and color temperature in the range of 3000-5000 K. I want to mention a quick return on investment. Despite the high initial cost of the equipment quickly justifies the cost. It affects the following factors durability low power consumption and impressive lifespan. The company Elektrosetservis implements led lighting wholesale and retail. Organize the delivery of goods on Moscow and Moscow region. Light calculation and selection of equipment based on technical specifications, our experts will make
