

## Led lighting

All happy thanks Bought the alarm system and related accessories works well brought on time Led lighting is one of the most promising technologies of artificial lighting. As light source it uses LEDs. It is rightly called because the innovation has already proven its advantages over the predecessors. Compared with incandescent bulbs, it can save up to 80% of electricity consumption in comparison with fluorescent and sodium lamps - more than 40%. But energy saving is not the only plus. The long term of their service speaks for itself after 10 years a considerable period. And that's the minimum To all other led lights are perfectly safe they just can't lead to overheating of electrical wiring. Undeniable advantages of this product you can lead to infinity but to appreciate them You will be only buying some of these products. And believe me after such acquisition in Your home will not appear any incandescent bulbs In our online store You will be able to choose and buy led streetlights and led lamps for the apartment and office spot light, led tube and many
