

Led street lighting

For lighting of streets and highways of various levels the best option is the use of led lamps for street lighting series LAD LED R320 with a cantilever mount. The instruments of this series comply with the state standards and have passed the mandatory and voluntary certification. For different conditions and requirements for light can be used led street lamps with different power depending on the number of modules. For General street lighting we recommend to use devices LAD LED R320 flood light lensless, the beam angle of 120°. Main lighting is strictly regulated by state standards which define one of the basic requirements uniformity of illumination. To ensure uniformity of the devices used with an elongated light spot of the wide luminous intensity curve. So the ideal solution for road lighting devices are LAD LED R320 with a special lens angle 120°X60° which provide high uniformity along the entire area of the backlight. Cantilevered devices pipe from O O 350 mm and 545 mm allows installing them on any supports and masts of street lighting. - explosion-proof led lamps - development of a design project lighting of the facade - led lamps for retail and office space.
